PREFACIO

La ley del Instituto Nacional de Meteorología e Hidrología - INAMHI, expedida el 15 de mayo de 1979, establece entre los objetivos y funciones “Obtener, recopilar, estudiar, procesar, publicar y divulgar los datos, informaciones y previsiones que sean necesarios para el conocimiento detallado y completo de las condiciones meteorológicas e hidrológicas de todo el territorio marítimo y continental ecuatoriano”; además reza, “Establecer, operar y mantener la infraestructura hidrometeorológica básica necesaria para el cumplimiento del programa nacional a efectuarse”.

Vigilar, comprender, predecir y analizar el tiempo, el clima y el agua, y comunicar esta información lo antes posible, son también funciones principales de los servicios meteorológicos e hidrológicos nacionales. La Variabilidad y Cambio Climático, que se manifiestan a través de la ocurrencia, con frecuencia creciente, de fenómenos extremos, tienen numerosas repercusiones en los ecosistemas, y por consiguiente, en las actividades humanas.

La información hidrometeorológica es útil, principalmente en los siguientes sectores de la economía: Transporte; Industria; Sanidad e Higiene; Diseño y Operación de Sistema de Agua Potable, Alcantarillado, Riego y Drenaje, Centrales Hidroeléctricas; Diseño de Vías y Puentes; Desarrollo Urbano; Manejo Ambiental; Turismo, etc.

El Anuario Hidrológico constituye una publicación regular del INAMHI, mediante el cual se entrega a la comunidad, en valores diarios, mensuales y anuales, los niveles y caudales medios, mínimos y máximos de los cuerpos hídricos, así como los resultados del monitoreo físico – químico y sedimentológico de ciertos ríos del país.

En alto porcentaje, el INAMHI financia sus actividades con asignaciones del estado, y genera información, previsiones y estudios, los cuales sin duda alguna, constituyen un necesario y valioso aporte al desarrollo sustentable y sostenido del país.

Sin embargo de que la información contenida en esta publicación pasa por un proceso de revisión, el INAMHI mantiene y reitera el compromiso de fortalecer la operación y mantenimiento de las estaciones, así como mejorar todo el proceso de gestión de la información, con miras a entregar a la comunidad datos confiables y oportunos.

Con el saludo del INAMHI a todos los usuarios,

Met. Carlos Naranjo Jácome
DIRECTOR EJECUTIVO

INTRODUCCIÓN

Disponer de datos adecuados para el diseño y operación de obras hidráulicas, para la administración del agua, para estudios ambientales, etc., demanda administrar una red de estaciones hidrometeorológicas suficiente a nivel nacional, regional y local; así también, que los diferentes subsistemas de Observaciones, Comunicaciones, Procesamiento, Base de Datos y Difusión que conforman el Sistema de Gestión de la Información, sean robustos y eficientes. Esto constituye un reto para el INAMHI y demanda recursos y el trabajo cotidiano de sus técnicos y observadores.

El Anuario Hidrológico está compuesto de tres secciones. La Primera Parte es una descripción general de los procedimientos bajo los cuales se realiza la toma de información y su procesamiento, se incluye a manera de instructivo, algunas recomendaciones dirigidas al usuario para el uso de la información publicada.

La Segunda Parte corresponde a los cuadros estadísticos, que contienen la información hidrológica, hidroquímica y sedimentológica, de las estaciones hidrométricas que opera el INAMHI y que corresponden al año del Anuario. Esta parte está constituida principalmente por los cuadros de niveles medios diarios, de estaciones hidrométricas que tienen al menos seis meses de información y, de cuadros de caudales medios diarios con su respectivo hidrograma anual (gráfico de variación de caudales diarios) de las estaciones, para las cuales se definió una ecuación de gasto líquido confiable (curva de descarga o de calibración de la sección hidrométrica). Se incluyen los reportes de aforos de gasto sólido y el registro de análisis físico - químico y bacteriológico de muestras de agua. Adicionalmente, se presentan los gráficos de las Curvas de Duración General de un conjunto de estaciones seleccionadas de las diferentes cuencas hidrográficas y que cuentan con series de información de los últimos 20 años.

En la Tercera Parte del Anuario, se incluyen los inventarios de todas las estaciones hidrométricas de aguas superficiales catalogadas por la Institución y también el listado de estaciones para las cuales se dispone de registros de información sedimentológica. Finalmente, los mapas de ubicación de las estaciones hidrométricas a escala nacional y por cuencas hidrográficas.

El INAMHI permanentemente está recopilando información y ampliando su base de datos meteorológica e hidrológica del país. Por tanto, se dispone de información adicional para consulta del usuario, además de datos en escalas de tiempo menores.

El acceso a la información no publicada en los Anuarios, está normado a través de un Reglamento aprobado por el Honorable Consejo Directivo del INAMHI (2006).

PARTE I

Nociones Generales

1. ESPECIFICACIONES SOBRE EL REGISTRO Y PROCESAMIENTO DE DATOS

1.1 INSTALACIÓN DE LAS ESTACIONES E INSTRUMENTAL

La instalación de las estaciones, así como la ubicación del instrumental para la toma y/o registro de los datos hidrológicos, han sido realizadas de acuerdo a normas internacionales.

A continuación, se citan algunas definiciones relacionadas con las estaciones, parámetros, instrumentos y las características de su instalación.

a) Estación Hidrométrica o Fluvimétrica

Es el lugar en donde se realizan sistemáticamente mediciones de caudal, sedimentos, muestreo hidroquímico y/u observaciones del nivel de agua, lo que permite conocer el régimen de un río, canal o el nivel de un lago o embalse.

Se denomina caudal, al volumen de agua que pasa por una sección transversal de una corriente en la unidad de tiempo y se mide en metros cúbicos por segundo (m^3/s) o en litros por segundo (l/s).

b) Aforo

Se denomina aforo a la medición de un caudal o volumen de sedimento en suspensión.

c) Altura limnimétrica o Nivel de Agua.

Se denomina altura limnimétrica a la cota de la superficie del agua con relación a un punto de referencia que puede tener una cota arbitraria o ser el nivel del mar.

El instrumento de medida se denomina limnímetro o piezómetro constituido por una regla con escala métrica de lectura directa. Adicionalmente, la estación hidrométrica puede contar con un instrumento de registro continuo denominado limnígrafo o piezógrafo.

d) Red Hidrométrica Superficial.

Es un conjunto de estaciones de medida que sirven para definir el régimen de un río, de una cuenca, de una región o del país.

La red puede comprender estaciones hidrométricas de Primero, Segundo, Tercer Orden o para fines especiales.

e) Red Hidrométrica Subterránea

Es un conjunto de puntos de agua que sirven para mediciones del nivel freático, muestreo para calidad físico-químico y otros parámetros de aguas subterráneas.

1.2 OBTENCIÓN DE LA INFORMACIÓN

La toma de la información limnimétrica se la obtiene a través de mediciones periódicas realizadas por el observador de la estación. En el caso de la red hidrométrica se registra una lectura en la mañana y otra en la tarde, procurando en lo posible realizarla siempre a la misma hora (generalmente 06:00 y 18:00). La información es registrada en los formularios diseñados para el efecto y tienen capacidad para contener la información diaria de un mes, que posteriormente es recopilada o enviada desde la estación de medición a las oficinas centrales de la Institución para su catalogación, archivo y procesamiento respectivo.

La obtención de datos de muestreo del caudal para una estación se lo realiza a través de trabajo de campo mediante campañas de aforo de gasto líquido, cuya planificación y ejecución lo realiza el personal técnico de Operación y Mantenimiento de la Red Hidrológica.

Los datos de sedimentos en suspensión, se obtienen de manera similar al caso anterior y se conocen como aforos de gasto sólido.

Adicionalmente a la toma de datos por el Observador y Operador de la estación, también se obtienen registros gráficos (limnigramas), los cuales registran en forma continua, la variación del nivel de los ríos con respecto al tiempo. Estos diagramas son de diversa escala de altura o nivel y de tiempo, pudiendo ser diarios, semanales, mensuales o para un período específico, dependiendo del tipo de instrumento registrador (limnógrafo) y del mantenimiento de la estación.

La obtención de los datos sobre pozos, manantiales y calidad físico-química del agua está a cargo de los técnicos de Hidrogeología y Laboratorio de Calidad de Agua y Sedimentología.

1.3 PROCESAMIENTO DE LA INFORMACIÓN

a) Niveles

Los niveles medios diarios del agua de los ríos, en aquellas estaciones que tienen limnógrafo se obtienen por el promedio ponderado de las lecturas limnigráficas registradas en 24 horas, o el promedio de las dos lecturas diarias para aquellas que solo disponen de limnómetro. Para las estaciones que cuentan con los dos tipos de registros, se utilizan las lecturas limnimétricas únicamente para períodos en los que no existen datos limnigráficos. En los cuadros estadísticos de niveles medios diarios, éstos se expresan en metros (m) mientras que los valores máximos, mínimos y medios mensuales se registran en centímetros (cm).

b) Caudales

Los caudales se calculan a partir de las lecturas limnimétricas y/o limnigráficas aplicando la ecuación o curva de descarga (curva de gasto líquido), la que es obtenida mediante un ajuste de mínimos cuadrados, a base de los caudales obtenidos de los aforos de gasto líquido realizados en una estación.

Los caudales medios diarios se obtienen como un promedio aritmético ponderado de los valores parciales de caudales generados en base de los niveles observados, a través de su respectiva curva de gasto líquido. En los cuadros estadísticos de caudales medios diarios, éstos se expresan en metros (m^3/s).

c) Sedimentos

Las muestras de sedimentos en suspensión tomadas en el campo, son procesadas en el Laboratorio de Calidad de Agua y Sedimentología, en donde se obtiene la concentración del sedimento (kg/m^3); y mediante procedimientos específicos, se realiza el cálculo para definir caudales sólidos (kg/s) y las ecuaciones respectivas.

d) Información de pozos y vertientes.

Mediante cálculo y utilizando formatos preestablecidos, se registran los niveles y otros parámetros de aguas subterráneas. La ubicación se registra en cartas a 1:50000.

e) Hidroquímica.

En el Laboratorio de Calidad de Agua y Sedimentología, se realiza el análisis hidroquímico de las muestras de agua superficial y subterránea, con el fin de conocer la calidad del agua, definir su composición y los efectos que pueden causar los elementos que contiene.

f) Curvas de Duración General

De todas las cuencas hidrográficas, se seleccionó un conjunto de estaciones que disponen información de un período continuo (1992-2011) con lo cual se hizo el trazado de las curvas de duración general con series de caudales medios diarios usando el método de Hazen para determinar la probabilidad.

2. CODIFICACIÓN DE LA RED DE ESTACIONES HIDROLÓGICAS

2.1 ESTRUCTURA DEL CÓDIGO DE LA ESTACIÓN

En el Banco Nacional de Datos Hidrometeorológicos, se ha normalizado el código de identificación de las estaciones hidrológicas para facilitar su identificación y administración de toda la información dependiente, sean datos generales, inventarios, mapas o estadísticas.

El código de la estación está formado actualmente por cinco caracteres, siendo el primero una letra que identifica la red de estaciones a la que pertenece, que para el caso de la red de hidrométrica es la letra H y para las estaciones de aguas subterráneas es S. Los otros cuatro caracteres numéricos, representan un identificador de la estación dentro de la red. Este código es único, de modo que, cuando una estación ha dejado de funcionar o ha sido levantada, se lo mantiene por cuanto identifica la información histórica que se generó en esa estación.

2.2 DATOS DE IDENTIFICACIÓN DE LA ESTACIÓN

Para cada una de las estaciones de la red, en el inventario se publican los siguientes datos generales:

- Código de la Estación.
- Nombre de la Estación.
- Código de Tipo de estación
- Código de Cuenca Hidrográfica
- Ubicación Geográfica:(Latitud, Longitud y Altura).
- Código de provincia. (Ubicación Política)
- Institución propietaria o que opera la estación
- Fecha de iniciación de observaciones
- Fecha de levantamiento o suspensión de la operación de la estación

Para comprender el inventario de estaciones, se detalla a continuación la descripción de la codificación utilizada para el tipo de estación, provincia y cuenca hidrográfica, con la zona a la que pertenece:

3. INSTRUCTIVO PARA USO DEL ANUARIO

3.1 CONSIDERACIONES GENERALES

Para facilitar el manejo del Anuario y especialmente los reportes estadísticos de los niveles y caudales a nivel diario de las estaciones hidrológicas superficiales, se incluye al inicio de la Parte Segunda, el índice de estaciones que tienen cuadros de niveles y caudales, acompañados de datos generales de ubicación, así como el número de la página en la cual se encuentra el cuadro de niveles diarios y en determinadas estaciones, el número de la página del cuadro de caudales. De igual forma, en los mapas de cuencas hidrográficas se incluye la ubicación de la red de estaciones hidrométricas que tienen definidas sus coordenadas geográficas.

Tanto las áreas de las cuencas hidrográficas como la ubicación de las diferentes estaciones, se han determinado en base de las Cartas del INAMHI, Instituto Geográfico Militar y SENAGUA en escalas 1:250000, así como de datos provenientes de otras instituciones para aquellas estaciones que no opera el INAMHI. Las alturas de las estaciones sobre el nivel del mar se han determinado en su mayoría por mediciones hechas con altímetro o GPS.

Con relación a los valores registrados en los cuadros de niveles y caudales se aconseja al usuario tomar en cuenta las siguientes consideraciones:

- Los cuadros estadísticos están organizados por año calendario y no por año hidrológico. Se publica la información de las estaciones que cuentan con al menos seis meses de información.
- El asterisco (*) que acompaña a cada valor, representa un dato proveniente de lecturas limnimétricas, si no consta el asterisco, corresponde a datos provenientes de limnigrafía. El espacio en blanco indica carencia del dato o inexistencia del instrumental en esa estación; o bien, insuficiencia de datos para los cálculos estadísticos.
- Los valores medios mensuales corresponden a una estadística de al menos 20 días de registro de observaciones.
- Los valores máximos y mínimos instantáneos se publican si la serie de datos diarios del mes está completa o cuando se registra un evento seco o crecida. Igualmente, se registra el día como **vv** cuando el mismo valor se ha producido varias veces en el mes.
- Para las estaciones en las que no se ha podido establecer la curva de descarga hasta la publicación del presente Anuario, se publican únicamente los datos de niveles.
- Los valores de caudales están normalizados con tres decimales, pero se aconseja considerar solamente 3 dígitos significativos.

El INAMHI posee información específica adicional, tanto observada o registrada como procesada de todos los datos que se generan en la red de estaciones de su propiedad, así como de otras Instituciones, la misma que no ha sido publicada en el presente Anuario pero se dispone en la Base de Datos Hidrológicos y podrá ser entregada a los usuarios de acuerdo a sus requerimientos.
